Claim Rejections - 35 USC § 112

Claims 1 – 34 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. The claims are directed toward a “method.” However, the steps to carry out such a method, which are critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976). One skilled artisan would not know how to use and/or make the invention (controlling at least one of an automated clutch and an automated transmission) absent the necessary steps.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 2, and 5 – 7 are further rejected under 35 U.S.C. 102(e) as being anticipated by Fritzer et al. (US 6,676,561 B2).

The applied reference has a common inventor with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome

Art Unit: 3661

either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Regarding claims 1, 2, and 5 – 7, Fritzer et al. teaches controlling at least one of an automated clutch and an automatic transmission in a motor vehicle (see figs. 1 and 2), wherein a target value for a clutch torque is determined by means of an electronic clutch management system (13; col. 10: 56 – 64 at least) as an output quantity of a start-up function dependent upon input quantity of an accelerator pedal (col. 1: 37 – col. 2: 8; col. 12: 57 – 65) and wherein determination is made of global torque contribution as a function of transmission input rpm-rate and engine rpm-rate (col. 7: 23 – col. 8: 40 at least).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Fritzer et al. ('561 B2) as applied to claims 1 and 2.

As discussed above, Fritzer et al teaches all of the limitations except for the implicit recitation of the start-up function being divided.

However, Fritzer et al. has been shown to teach a start-up function corresponding to start-up phase of vehicle operation (note col. 3: 27 – 34 and col. 8: 30 – 40 at least) and a factor calculation (col. 12: 24 – 39).

It would have been obvious to one of ordinary skill in the art at the time of the invention dividing such function into at least two phases would only involve routine skill in the art because Fritzer teaches an operation that performs equally well.
